Profile

Second year UBC Engineering Physics student with a strong foundation in math and physics, sophisticated problem-solving skills, and ability to quickly learn new concepts and technologies. Proficient at turning theoretical ideas into functioning prototypes, using tools such as CAD, programming software, and breadboarding. Experienced in fostering healthy and strong team dynamics and collaborating with others to efficiently analyze and overcome technical challenges.

Skills

Electrical: Oscilloscopes, Arduino, Circuit Analysis & Design
Mechanical: Fusion360, AutoCAD, Technical Drawings
Software/MS: PowerPoint, Word, Excel, Python, Java, JS/CSS/HTML, C/C++, Latex, MATLAB

Projects/Experience

Mechanical Claw | *UBC* **Jan – Feb 2026**

- Collaborated with a team to design and program a mechanical claw with a sensor based closing mechanism using Arduino
- Optimized the claw shape and grabbing mechanism making it able to grasp and lift objects with various weights, shapes, and sizes
- Programmed the sensor to carefully control the opening and closing of the claw near enough to an object, and debugged edge cases of the claw's specific intended function

Cardboard Chair | *UBC* **Sep – Nov 2025**

- Designed and constructed a chair from a 4ft-by-4ft piece of cardboard which withstood a weight of 200 pounds, the highest of 8 teams in the competition
- Arranged meetings and worked together with team members through idea generation, prototyping, and constructing the final design
- Kept a record of all generated ideas, prototypes, and technical issues

Summer Camp Activity Leader | *Global College* **July – Aug 2026**

- Supervised and engaged with groups of international students ages 8-16, leading various English oriented activities and supported them in overcoming language barriers
- Took responsibility in ensuring the students' well-being and dealt with conflicts in a peaceful and considerate manner

Education

Engineering Physics, BASc. | *UBC, Vancouver* **Sep 2025 – Present**
Key Courses: Experimental Techniques, Electricity & Magnetism (Physics 158), Linear Circuits, Mechanics I
